CONTENT MONETIZIATION MODELAR

INSIGHTS

- **Insight 1: Watch Time is Most Important**

From the analysis, watch_time_minutes has a very strong relationship with ad_revenue_usd. This means videos where people watch for a longer time generate more revenue. So, creators should focus on making engaging content that keeps viewers watching for a longer duration.

- **Insight 2: Likes and Comments Have Some Impact**

Likes and comments have a small positive effect on revenue. This shows that engagement is helpful, but it is not as important as watch time. So, creators should still encourage likes and comments, but focus more on watch time.

- **Insight 3: Views Alone Are Not Enough**

Even though views are high, they do not strongly affect revenue compared to watch time. This means just getting views is not enough. Viewers should also stay and watch the video longer to increase revenue.

CONTENT MONETIZIATION MODELAR

- **Insight 4: Engagement Rate Helps**

The new feature engagement_rate (likes + comments / views) shows how active users are. Higher engagement rate can help improve revenue slightly, so interactive content is useful.

- **Insight 5: Content Category Matters**

Different video categories may generate different revenue levels. Some categories like entertainment or education may perform better. So, choosing the right content type is important.

- **Insight 6: Timing Can Affect Performance**

From date features like hour and weekday, video performance may vary based on upload time. Posting videos at the right time can help improve reach and revenue.

- **Insight 7: Model Insight**

The Linear Regression model performed very well, showing that the relationship between features and revenue is mostly linear. Watch time was the most important feature in prediction.

OVERALL IT REVENUE MAINLY BASED ON WATCH TIME
